

Equivalent Fractions

Cut out the cards.

$$\frac{1}{2} = \frac{\square}{4}$$

$$\frac{1}{2} = \frac{\square}{6}$$

$$\frac{1}{2} = \frac{4}{\square}$$

$$\frac{1}{2} = \frac{\square}{10}$$

$$\frac{1}{2} = \frac{\square}{12}$$

$$\frac{1}{3} = \frac{2}{\square}$$

$$\frac{1}{3} = \frac{\square}{12}$$

$$\frac{2}{3} = \frac{\square}{6}$$

Equivalent Fractions

Print double-sided: flip on the long edge.

$$\frac{1}{2} = \frac{3}{6}$$

$$\frac{1}{2} = \frac{2}{4}$$

$$\frac{1}{2} = \frac{5}{10}$$

$$\frac{1}{2} = \frac{4}{8}$$

$$\frac{1}{3} = \frac{2}{6}$$

$$\frac{1}{2} = \frac{6}{12}$$

$$\frac{2}{3} = \frac{4}{6}$$

$$\frac{1}{3} = \frac{4}{12}$$

Equivalent Fractions

Cut out the cards.

$$\frac{2}{3} = \frac{8}{\square}$$

$$\frac{1}{4} = \frac{\square}{8}$$

$$\frac{1}{4} = \frac{\square}{12}$$

$$\frac{2}{4} = \frac{4}{\square}$$

$$\frac{2}{4} = \frac{\square}{12}$$

$$\frac{3}{4} = \frac{\square}{8}$$

$$\frac{3}{4} = \frac{9}{\square}$$

$$\frac{1}{5} = \frac{\square}{10}$$

Equivalent Fractions

Print double-sided: flip on the long edge.

$$\frac{1}{4} = \frac{2}{8}$$

$$\frac{2}{3} = \frac{8}{12}$$

$$\frac{2}{4} = \frac{4}{8}$$

$$\frac{1}{4} = \frac{3}{12}$$

$$\frac{3}{4} = \frac{6}{8}$$

$$\frac{2}{4} = \frac{6}{12}$$

$$\frac{1}{5} = \frac{2}{10}$$

$$\frac{3}{4} = \frac{9}{12}$$

Equivalent Fractions

Cut out the cards.

$$\frac{2}{5} = \frac{\square}{10}$$

$$\frac{3}{5} = \frac{6}{\square}$$

$$\frac{4}{5} = \frac{\square}{10}$$

$$\frac{1}{6} = \frac{\square}{12}$$

$$\frac{2}{6} = \frac{4}{\square}$$

$$\frac{3}{6} = \frac{\square}{12}$$

$$\frac{4}{6} = \frac{\square}{12}$$

$$\frac{5}{6} = \frac{10}{\square}$$

Equivalent Fractions

Print double-sided: flip on the long edge.

$$\frac{3}{5} = \frac{6}{10}$$

$$\frac{2}{5} = \frac{4}{10}$$

$$\frac{1}{6} = \frac{2}{12}$$

$$\frac{4}{5} = \frac{8}{10}$$

$$\frac{3}{6} = \frac{6}{12}$$

$$\frac{2}{6} = \frac{4}{12}$$

$$\frac{5}{6} = \frac{10}{12}$$

$$\frac{4}{6} = \frac{8}{12}$$
