Name _____ Date _____

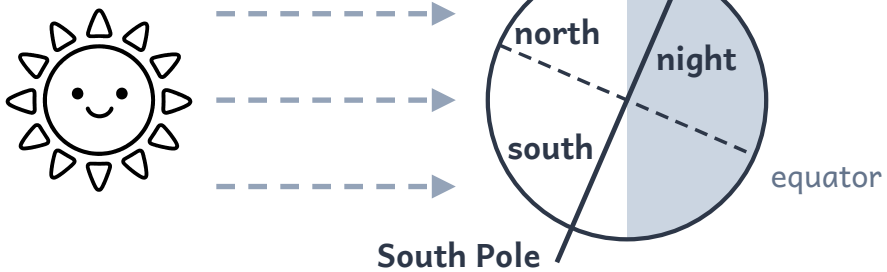

The Summer Solstice

Read the text and look at the picture. Then answer.

Why Do We Have a Solstice?

Earth moves around the sun. It takes one year to go all the way around. Its path is called its **orbit**. Earth also spins like a top, once each day. It spins around a line from the North Pole to the South Pole. This line is called its **axis**. But the axis is not straight up and down. It leans to one side, and it always leans the same way. In December, the southern half of Earth leans towards the sun. It gets more sunlight, so it is summer there. The northern half leans away, so it has winter. Each year has two days when one half leans the most towards the sun. Each one is called a **solstice**. One comes in June, and one in December.

In December, the southern half leans towards the sun. It is summer there.

The northern half leans away from the sun. It is winter there.

1. Earth's axis is straight up and down. **true** **false**

2. Earth goes around the sun once a ____ **day** **week** **year**

3. How many solstices are there each year? **two** **one** **four**

4. Look at the picture. Why is it summer in the south in December?

The Summer Solstice

Read the text and look at the picture. Then answer.

The Longest Day

In Australia and New Zealand, the December solstice comes around 22 December. It is the longest day of the year and the shortest night. At midday, the sun is very high in the sky, so shadows are short. The word **solstice** means "the sun stands still." From September on, the sun comes up a bit farther south each day. On the solstice, it stops. Then it turns back, and the days get a little shorter. At the same time, the north has its shortest day!

1. In the south, the December solstice is the **coldest** **longest** **shortest** ____ day of the year.

2. After the solstice, the days in the south get shorter. **true** **false**

3. What does the word solstice mean?

_____

_____

_____

4. Why are shadows short at midday on the solstice?

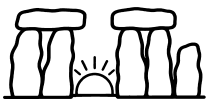

_____

_____

_____

The Summer Solstice

Read about two old places in the north. Then answer.

Newgrange

Newgrange is in Ireland. People built it more than 5,000 years ago. That is even older than the pyramids of Egypt! It is a big, round hill of earth and stone. Inside, a long, narrow hall leads to a room. Over the door is a small opening called the roof box. On a few mornings around the December solstice, the sun comes up and shines in through it. A beam of light moves down the hall. It lights up the room at the end for about 17 minutes.

1. Newgrange is in ___ **Egypt** **Ireland** **England**

2. Newgrange is older than the pyramids of Egypt. **true** **false**

Stonehenge

Stonehenge is in England. It is a ring of giant stones. The biggest ones are more than twice as tall as a grown-up. People began to build it about 5,000 years ago. The builders lined up the tallest stones with the sunset on the shortest day there, in December. In June, on the longest day there, the sun comes up near a big stone outside the ring. People still go there to watch.

3. Stonehenge is a ring of giant ___ **towers** **stones** **trees**

4. At Stonehenge, the tallest stones line up with the sunset in June. **true** **false**

5. How can you tell that the builders watched the sun closely?

The Summer Solstice

Read about two winter nights in the north. Then answer.

Dongzhi

In China, the December solstice is called **Dongzhi** (dong-jur). Its name means "the peak of winter." It is a very old festival. Many families get together for it. They share warm food on the longest night of the year in China. In the south of China, many families eat **tangyuan**. These are sweet balls of sticky rice in a warm soup. The round balls stand for a family being together. In the north of China, many eat dumplings.

1. Tangyuan are sweet balls of ___ **sticky rice** **meat** **ice**

2. In the north of China, many families eat dumplings for Dongzhi. **true** **false**

Yalda Night

In Iran, the longest night of the year is called **Yalda** (yal-DAH) Night. Families get together, often at the home of a grandparent. They stay up late. They eat red fruits, such as **pomegranates** and watermelon. They eat nuts and dried fruit too. Many read poems out loud by Hafez, a poet from long ago. After this night, the days in Iran start to get longer. Families in Afghanistan have this night too.

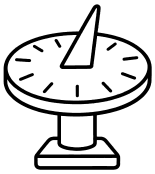

3. On Yalda Night, families eat red fruits such as ___ **bananas** **pomegranates** **lemons**

4. In Iran, Yalda is the shortest night of the year. **true** **false**

5. How are Dongzhi and Yalda Night alike?
